An assessment was done by Dr. Thomas G. Mignerey, MD, a Child Protection Team Pediatrician. Dr. Mignerey states in his report that "six months ago he weighed 6.9 killograms with well documented weight of 8.2 kilograms two years ago. It would appear that he has been somewhat lost to follow up. He came to the pediatric clinic one mouth ago as parent sought a new primary care physician. This was on 2/12/08. His weight at that time was 5.835 kilograms and the child is now admitted at 5.6 kilograms. The child therefore has lost nearly six pounds in the last two years despite the fact the child has a feeding tube and is apparently able to take some oral feedings. The child also comes into the hospital on this occasion with fairly impressive decubitiover the sacral bony prominences. The child is on a number of medications including The child is supposedly getting Pedia Sure by mouth and/or a PE
